Eligible to work in Canada (Permanent Resident or Citizen), no restrictions

SUMMARY

Analytics professional with industry experience across automotive manufacturing, supply chain, and software delivery, now returning to a hands-on analytics role. Combines advanced SQL and Python with dashboard development in Power BI and Tableau, ETL and data validation, and business analysis covering requirements, UAT, and process improvement. Spent recent years leading an applied analytics program where the work stayed technical: building a SQL training platform, developing dashboards, and running 100+ end-to-end analytics engagements on real business data. Strongest at converting messy, high-volume data into decision support that stakeholders act on.

TECHNICAL SKILLS

Programming: Python (pandas, scikit-learn, NumPy), R, SQL, JavaScript

Databases: MySQL, PostgreSQL, SQLite, relational data modelling, query design and optimization, ETL, data cleaning and validation

BI and Visualization: Power BI, Tableau, Excel (pivot tables, advanced formulas), data visualization and dashboard development, KPI reporting, reporting automation, self-serve reporting, data storytelling

Business Analysis: Requirements gathering and documentation, user stories and acceptance criteria, business process mapping, gap analysis, user acceptance testing (UAT), user training, stakeholder management

Analytics: Statistical analysis, predictive modelling, segmentation, classification, forecasting, root cause analysis, scenario analysis, data mining, decision support

Tools: Git, GitHub, JIRA, Confluence, Jupyter Notebook, IBM CPLEX, Microsoft Office; familiarity with AWS

Methodologies: Agile and Scrum, data governance, data quality management, process improvement, workflow automation, cross-functional collaboration

PROFESSIONAL EXPERIENCE

Assistant Professor, Applied Business Analytics

Sep 2022 to Apr 2026

Cape Breton University, Shannon School of Business

Sydney, NS

- Designed and shipped a **browser-based SQL analytics platform** with 156 runnable queries, live execution, and automated answer validation, adopted as the primary self-serve practice tool by 800+ users and cutting repeat support requests 30%. Tools: SQL, JavaScript, SQLite.
- Led **100+ end-to-end analytics engagements** on real healthcare, e-commerce, and telecom datasets, spanning requirements gathering, ETL and data cleaning, relational modelling in MySQL, segmentation and classification, and dashboard delivery; 85% shipped a working model and dashboard.
- Migrated the analytics toolchain from spreadsheet workflows to **SQL and Power BI**, standardizing reporting practice and lifting delivery quality scores from 4.2 to 4.8 out of 5.
- Built reusable data assets and query libraries that cut environment refresh cycles from **two weeks to two days**, an 80% reduction in setup effort.
- Enforced data validation, documentation, and quality standards across all analytics deliverables, reviewing outputs before release to stakeholders.

Data Analyst, Operations and Decision Analytics

Sep 2020 to Nov 2023

Toronto Metropolitan University (formerly Ryerson)

Toronto, ON

- Built predictive and optimization models in **Python and IBM CPLEX** over large operational datasets, applying scenario and sensitivity analysis to deliver decision support under uncertainty.
- Delivered a supply chain network model that reduced **costs 8% and delivery times 20%** against the incumbent approach, validated across 18 demand and price scenarios.
- Documented methods, assumptions, and limitations for technical and business audiences; findings published in peer-reviewed journals.

Project Manager

Mar 2018 to Jul 2020

Mehr Naghsh Afarinan Shayan Company

Tehran, Iran

- Delivered a customer-facing software product from concept to launch, leading a **cross-functional team of 5** through two-week Agile sprints with the backlog managed in JIRA.
- Cut release cycle time **25% and post-release defects 30%** by introducing sprint planning and structured backlog grooming.
- Secured continued product funding by building and presenting business cases to executives and investors.
- Coordinated user acceptance testing with business stakeholders, tracking defects to closure in JIRA ahead of each release.

Business Analyst

Sep 2017 to Mar 2018

Mehr Naghsh Afarinan Shayan Company

Tehran, Iran

- Elicited and documented **40+ business requirements**, translating them into user stories and acceptance criteria that drove the development backlog.
- Reduced rework from unclear requirements 20% by mapping current-state processes and running gap analysis to lock scope before build.
- Bridged business and engineering teams through delivery; promoted to Project Manager within six months.

Data Analyst

Sep 2016 to Sep 2017

Sazeh Gostar Saipa (S.G.S.), SAIPA Automotive Group

Tehran, Iran

- Automated **12 recurring executive reports** in SQL (MySQL, PostgreSQL), cutting manual preparation effort 40% and reducing turnaround from three days to one.
- Developed procurement, cost, and market **KPI dashboards** that gave 20+ business stakeholders self-serve access to reporting previously delivered by email request.
- Delivered ranked supplier recommendations by evaluating **15 procurement options** against technical, cost, and market criteria, directly informing import and assembly decisions.
- Implemented data validation controls on reporting inputs that caught errors before publication and reduced reporting corrections 50%.

SELECTED PROJECTS

Executive Reporting and Customer Segmentation, E-commerce

- Delivered end-to-end analysis of **112,650 orders** in MySQL: relational schema design, RFM feature engineering, K-Means segmentation into three actionable customer groups, and a Power BI dashboard covering revenue, seasonal trends, and payment behaviour, converted into targeting recommendations. Tools: MySQL, Python, Power BI.

Customer Conversion Analysis (Marketing Analytics)

- Isolated the drivers of conversion across **8,000 customer records** by comparing three models and mining association rules; behavioural signals such as time on site outweighed demographics, with the best model reaching 0.90 accuracy. Tools: Python, scikit-learn. github.com/ebiisharifi/digital-marketing-conversion-analysis

SQL Practice Platform, 156 Runnable Questions (Open Source)

- Built a fully client-side SQL learning platform with a live query editor, instant execution, and automated answer checking over realistic multi-table datasets. Tools: SQL, JavaScript, SQLite. github.com/ebiisharifi/sql-practice-lab

Large Dataset Classification Pipeline (Healthcare)

- Built a reproducible pipeline over **253,680 records and 21 features**: data cleaning, feature selection, resampling for class imbalance, and benchmarking of five algorithms, lifting minority-class recall 15%. Tools: Python, scikit-learn.

CERTIFICATIONS

- **Master SQL for Data Analysis**, Packt, 2026
- **Data Science Fundamentals with Python and SQL**, IBM, 2026
- **Advanced Business Analytics**, University of Colorado Boulder, 2026
- **Professional Engineer (P.Eng.)**, Engineers Nova Scotia, 2026
- **Diploma in Operational Research**, Canadian Operational Research Society, 2021

EDUCATION

Ph.D., Industrial Engineering (Analytics and Optimization)

2020 to 2023

Toronto Metropolitan University, Toronto, ON

M.Sc., Industrial Engineering (Engineering Management)

2016 to 2018

Iran University of Science and Technology, Tehran, Iran
